

ABSTRACT

The invention relates to an absorbent article, such as a sanitary towel, a panty liner, a tampon, a diaper or an incontinence pad, which article is intended to be positioned in the crotch area of a wearer and has a surface intended during use to be in contact with skin and/or mucous membranes. The article comprises at least one absorbent body (205) and a carrier (102) containing at least one additive intended to be released from the carrier (102). The carrier (102) comprises a polysiloxane gel.
